Meeting Agenda

Date: 2016-05-05
Facilitator: Lisa Karlsson
Participants: Sabrina Samuelsson, Lisa Karlsson, Simon Moos, Hannes von Essen

1. Objectives (5 min)
Resolve any issues preventing the team to continue.

> Report
> SDD
> RAD
> Collectibles

2. Reports (15 min)
from previous meeting

> Sabrina & Hannes: Parachute steering works some
> Simon: Clouds
> Lisa: Landing and restarting

3. Discussion items (35 min)

> Parachute turns to a degree, after that it stops turning. Much back and forth coding, look through the code and clean it up.
> Good idea to clean up the code all over before implementing new features. Make methods prettier and fix dependencies between classes, for example.
>
> Clouds look nicer, and gives the illusion that the plane is moving.
>
> Landing, restarting and tests for these implemented.
>
> Continue the work with the report. Look especially at the purpose section.
>
> Work with making a preliminary SDD
>
> Revise the RAD
>
> We have almost finished the absolute goals we had set - the next step is to implement collection of items - like balloons or simple rings. There would be no difference in implementation, basically. Rings have the advantage that they don't have to be logical.
>
> Fun idea - easter eggs like weird things floating far away, or a whale that eats you.

4. Outcomes and assignments (5 min)

Hannes & Sabrina continues with the parachute steering.
Lisa does report, SDD, RAD

After merge, everyone looks at the code.

5. Wrap up

Collectibles (will only be worked with if there is time)

Next meeting: Monday 9/5
